

Pickup Truck Rims

Each Jensen Diecast pickup truck rim set is sold “per set”, as in 4 rims for 1 vehicle. Tires are not included with the rim sets as these are designed to be used with tires made from existing vehicles. Currently (8/11/2020) our rims are designed to fit either “ERTL Dodge tires” or “M2 truck tires”. It is stated online which rim fits which tire. Examples of the vehicles utilizing these tires are shown to the side.

Examples of “ERTL Dodge”
Left depicts 2011 - 2018 Ram 2500
Right depicts 2003 - 2009 Ram 2500

Example of “M2 Truck”
The tires on this truck will fit the rims that we sell for “M2 Truck Tires”.

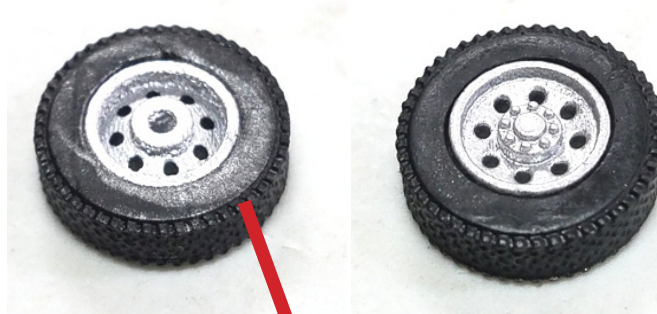

Instructions

Prerequisites:

- Desired Paint
- 1/16” Drill Bit

Jensen Diecast pickup truck rims are designed to accept a 1/16” axle. Some vehicles may not be able to utilize an axle this large. If you are trying to add these wheels to a vehicle that cannot accept an axle that is 1/16” you will need to make custom modifications to the vehicle or the rim.

It is recommended to insert the rim from the back side of the tire to prevent paint smear from being visible. On rubber tires, paint smear can easily be removed with paint thinner and a cotton swab. If the tire being utilized is too stiff to stretch over the rim, try heating the tire with a heat gun or hot water.

Example of paint smear

Use a 1/16” drill bit to remove excess paint/debris from the axle connection. Insert the 1/16” axle and glue into place.
